

Book 2, Article 7.3

A question was raised by a Member Association on the legality of the bow commonly known as the "Hungarian Horse Bow" (see attached pictures)

The Constitution and Rules Committee finds the question presented to be within terms of reference of the Technical Committee. The Constitution and Rules Committee has determined that the following Interpretation of the Technical Committee is not contrary to the existing rules or Congress decisions.

Response from the Technical Committee:

Please note that there are several styles of the Hungarian Horse Bow on the current market. For this reason, all Hungarian Horse Bows cannot be considered equal in the division they would be allowed.

It is the official opinion of the FITA Technical Committee that the Hungarian Horse Bow is legal in the Recurve Division, and in some cases in the Instinctive Division (under 3D archery) and in the Barebow Division. With regard to the Barebow Division and Instinctive Division, some of the Hungarian Horse Bows have on the belly side of the bow, stitching, cross weaving and other means to secure covering over the bow limbs. Bows that are manufactured in this way would not be legal in the FITA Barebow Division or Instinctive Division due to the raised stitching and or weave that could constitute a means for aiming. However, other manufactures or models of Hungarian type Horse Bows do not possess such marks or protrusions and therefore are considered legal in the FITA Barebow Division and Instinctive Division, as long as they adhere to the rules governing the recurve bow as used in this specific discipline.

Furthermore, there are many types of Horse Bows other than the Traditional Magyar (Hungarian) bow style. For example there are Mongolian, Korean, Assyrian, Scythian, Turkish and others of similar design. Virtually all would meet the specifications of the rules pertaining to the Hungarian Horse Bow rule and therefore would be legal within the above parameters.
